Exhibition & Conference

Technologies | Products | Sustainable Energy
13 - 15 November, 2012 | Doha Exhibition Centre

www.eco-q.org

OVERVIEW

ecoQ is a multi-sector environment exhibition & conference addressing advancements in environment protection technologies, sustainable energy and green business practices applied towards more sustainable future. ecoQ is an excellent opportunity and a unique platform for global business leaders and investors in the environmental, renewable energy and sustainability sectors to meet with local and regional government officials, business representatives, trade associations, institutional stakeholders, academics, NGOs and other parties interested in reaching out to the rapidly growing market of products and technologies designed to protect the environment.

ecoQ is set to become the biggest gathering of the environment industry in Qatar as it is the perfect place for interested visitors represented from all types of related businesses including local authorities for whom environment protection and sustainable development is the main focus.

ecoQ is an international annual exhibition & conference taking place in Qatar for three days on 13th to 15th of November 2012, at Doha Exhibition Centre. The 10,000 sqm expo will showcase latest technologies, products on environment protection and sustainable energy.

In addition to the business aspect of the exhibition & conference, a number of events and campaigns are planned in parallel to ecoQ to increase community awareness on environmental issues.

ecoQ is a **unique platform** for global business leaders and investors in the **environmental, renewable energy** and **sustainable** sectors

QATAR

The Right Place | The Right Time

- ecoQ Exhibition & Conference 2012 is organized in Qatar, one of the world's fastest growing economies, the highest per capita income and the world's biggest producer of liquefied natural gas.
- Qatar's victorious success to host the World Cup in 2022 for the first time in the Middle East has generated positive global attention to the state and its vision to set a leading example in organizing this massive sport event with minimum impacts on the environment. Qatar 2022 FIFA World Cup will be the first carbon-neutral World Cup, utilizing sustainable technologies and high-end cooling systems for its twelve state-of-the-art stadiums, fan zones and training grounds. The event is a catalyst for the development and the expansion of the economy and population overall.
- The impact of Qatar winning its bid for the 2022 FIFA World Cup would be profound for the state, its people and the region. a second international airport is due to open in 2012 with the capacity to handle 50 million passengers a year.
- Qatar has also won the bid to host the 8th World Chambers Congress (WCC) in 2013, bringing the event for the first time to the Middle East.
- Qatar was the host country for the AFC Asian Cup 2011.

Sikat Al Wadi

Dohaland

Green QATAR

Qatar's successful bid for the 2022 World Cup will spur rapid deployment of more renewable technologies as the country aims to make good on its pledge to host a low carbon event.

Qatar's environmental industry is poised for growth due to the steady inflow of government funds and FDI.

Recycling and other environmental services segments have huge growth potential due to the rapidly expanding population as well as the country's stringent environmental laws, which mandate waste treatment and recycling for facilities.
